FAMILY BEGINS WITH A HEARTBEAT

Good day Mommy!

We are so excited to see you and your baby!!

Few things to know before your 4D Scan:

1.DRINK, DRINK, DRINK!!! We ask our moms to double up on their water intake the entire week before an ultrasound. To obtain a 3D/4D ultrasound, our waves need to travel through fluid. More fluid in front of baby's face, means better quality pictures.

2.Eat a lite snack before you come in. When you eat before an ultrasound, it'll cause your baby to be more active during the scan, making them a lot easier to see.

Looking forward to see you!!

Kind Regards

Fetal Ultrasound Centre Team!
